## Wire Size Recommendations

Voltage drop is a significant issue in marine electric equipment. The American Boat and Yacht Council (ABYC) offers the following charts to determine appropriate wire sizes based on the amp load and run length of wire in a given application. Charts for 3% and 10% voltage drop are below. ABYC recommends using wire based on the 3% chart for "sensitive" equipment (eg. electronics). For most Imtra products (windlasses, lighting, windshield wipers), wire selected using the 10% drop chart is sufficient. For all products, consult the owner's manual for specific wiring instructions and/or size recommendations.
